

Abstract of Disclosure

A subscriber terminal for a radio system and an arrangement, a method and a computer program for presenting contact attempts to a subscriber terminal of a radio system are disclosed. The subscriber terminal includes: a transceiver configured to receive calls and messages; a control unit connected to the transceiver configured to save unanswered call data and messages relating to unanswered calls, and to constitute contact attempts from the unanswered call data and the messages relating to the unanswered calls; and a user interface connected to the control unit configured to present the contact attempts.
